

## ZINC-RICH COLD GALVANIZING

### Description

**Zinc-rich** formula protects metal surfaces against salt water corrosion and rust even when scratched or abraded. Also used to prepare surfaces to be welded and after welding for added protection.

### Use/Benefits

- 97% Zinc content in dry film
- Highly resistant to rust, salt and water corrosion
- Fuses zinc to metal substrate to protect against rust and corrosion
- Anti-sag and Anti-settling properties enables build up of uneven surfaces
- Can be used as a primer for most paints
- Excellent for use as a weld-thru primer and an after weld coating
- Authorized by USDA for use in federally inspected meat/poultry plants as a coating for application to structural surfaces and machinery & equipment where "incidental food contact" ONLY may take place
- Can be applied over wide range of temperatures. Heat resistant up to 65°C (150°F)
- Non-chlorinated formulation

### Physical Properties

Colour	-	Matte grey
Odour	-	Aromatic
pH	-	Not applicable
Flammable	-	Yes

### Package

Can size: 16 oz  
369 grams (13 oz)

### Product
